

TRANSMIG 400i

The Transmig 400i is a digitally controlled, DC MIG/STICK/ lift TIG power source. Features include multi-process capabilities, variable inductance and a digital voltmeter and ammeter making this the ultimate unit

for precision welding of steel and other DC weldable materials. The unit also has an integrated Voltage Reduction Device (VRD) built in for improved operator safety.

Features:

- ▲ Multi-process GMAW, MMAW, GTAW
- ▲ Standards compliant built-in Voltage reduction Device
- ▲ Save/Load (recall) weld programs
- ▲ Embedded micro processor with digital controls
- ▲ Exceptional DC welding characteristics
- ▲ Easy to use digital display and panel controls
- ▲ Digital volt meter and ammeter
- ▲ MIG, Lift TIG & Stick weld operations
- ▲ Variable inductance control in Mig mode
- ▲ Compact, lightweight & portable

Part No: 710014

4R WIRE FEEDER

VAF-4 – 705700
